## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 3\_Q4

Attempt : 1

Total Mark : 10

Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Sesha is developing a weather monitoring system for a region with multiple weather stations. Each weather station collects temperature data hourly and stores it in a 2D array.

Write a program that can add the temperature data from two different weather stations to create a combined temperature record for the region.

##### ***Input Format***

The first line of input consists of two space-separated integers N and M, representing the number of rows and columns of the matrices, respectively.

The next N lines consist of M space-separated integers, representing the values of the first matrix.

The following N lines consist of M space-separated integers, representing the values of the second matrix.

### ***Output Format***

The output prints the addition of the two matrices in N rows and M columns, representing the combined temperature record.

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 3 3

1 2 3

4 5 6

7 8 9

1 1 1

2 2 2

3 3 3

Output: 2 3 4

6 7 8

10 11 12

### ***Answer***

```
import java.util.Scanner;
class Main{
    public static void main(String args[]){
        Scanner sc=new Scanner(System.in);
        int N=sc.nextInt();
        int M=sc.nextInt();
        int[][] m1=new int[N][M];
        int[][] m2=new int[N][M];
        int[][] sum=new int[N][M];

        for(int i=0;i<N;i++){
            for(int j=0;j<M;j++){
                m1[i][j]=sc.nextInt();
            }
        }

        for(int i=0;i<N;i++){
```

```
for(int j=0;j<M;j++){
    m2[i][j]=sc.nextInt();
}
for(int i=0;i<N;i++){
    for(int j=0;j<M;j++){
        sum[i][j]= m1[i][j]+ m2[i][j];
    }
}
for(int i=0;i<N;i++){
    for(int j=0;j<M;j++){
        System.out.println(sum[i][j]+" ");
    }
}
}
```

**Status :** Correct

**Marks :** 10/10
